

SILAMOL

THE ONLY PLANT AVAILABLE FORM OF SILICON.
REAL CROP PROTECTION THROUGH PROPER
PLANT NUTRITION.

We have used Silamol for the past 3 years, first 2 years in expanded trials with a Treated and a Control on both Red and white grape varieties. We have seen Healthier stronger plants, higher quality Juice, which has helped produce Higher Quality Wine . This year we used Silamol on our entire 400 Acre Farm. We applied Silamol as a Foliar Spray 8 times, using the recommended 125 mils per acre per application every 10-14 days.

NOTL , Ontario. Grape Grower**

Adding Silamol to your Fertilization program helps decrease the negative impact of Abiotic and Biotic Stress to your Plants. Silamol contains a high concentration of Stabilized Mono Silicic Acid. Once Silamol is assimilated by plants it is transported through the Xylem to the cells of stems, foliage and Fruit. Then it is stored in the cell membranes creating a mechanical barrier, strengthening cell walls and increasing the Plants Natural defense mechanisms. Silamol also enhances the uptake of Calcium and improves the utilization of your nutrients so many crops see increased Brix , nutritional value and overall improved Health.
